

Iwatani International Corporation History and Background

In 1930, a man by the name of Mr. Naoji Iwatani started a business dealing with industrial gas in the Japanese market. As a man with many guiding principals, he grew his company with an awareness of the delicate balance between the Earth's natural resources and human consumption along with his philosophy of "Become a person needed by society, and those needed by society can prosper". In 1945, he formally established the premier gas and energy company, Iwatani International Corporation.

Iwatani's LPG Tanker, the "Pacific Century"

Since its establishment, Iwatani has become not only a domestic leader, but also a global leader. As one of the leading companies in Japan for industrial gases (Including hydrogen, oxygen, helium, and others) and liquefied petroleum gas (LPG), Iwatani expanded to become a leading supplier of these materials to the global market. In addition, Iwatani has established over 300 subsidiary and affiliate offices worldwide, allowing it to develop itself in various industries, including welding, raw materials, semiconductor manufacturing, agriculture, and many others. Also, not overlooking its concern for environmental awareness, Iwatani's main offices in Japan, located in Tokyo and Osaka, are both accredited with ISO 14000, the industrial standard awarded to only companies that vigilantly limit their daily operation waste.

One of Iwatani's transport containers

With its mastery of LPG knowledge and application, Iwatani was able to develop the Cassette-Feu, the very first portable butane powered gas stove, in 1969. Known for safety and constantly developing new and innovative features, Iwatani has been the number one company to produce butane stoves in Japan. To pay homage to the original Cassette-Feu stove, the Cassette-Feu series of butane stoves was established.

Iwatani supplies numerous industries, including Stainless Steel and Processed Products

Production from these factories supply exports to countries all throughout Asia, Europe, and the Americas.

As one of the leading companies in Japan for industrial gases (Including hydrogen, oxygen, helium, and others) and liquefied petroleum gas (LPG), Iwatani expanded to become a leading supplier of these materials to the global market.

With its mastery of LPG knowledge and application, Iwatani was able to develop the Cassette-Feu, the very first portable butane powered gas stove, in 1969. Known for safety and constantly developing new and innovative features, Iwatani has been the number one company to produce butane stoves in Japan.

Iwatani's reputation for building the safest and most innovative stoves comes in part from the fact that it owns factories in Japan and China. By being in control of the production process, Iwatani is able to ensure that every product is made under the tightest quality control regulations. New product development and production are also streamlined.

IWATANI PRODUCT

The First Portable Butane Stove, "Cassette-Feu"

Japanese Contemporary Model, "Miyabi"

Japanese Good Design Award Winner, "Amorfo"

Eco-Friendly Design Model, Cassette-Feu "Eco"
